

# CSE205:DATA STRUCTURES AND ALGORITHMS

L:3 T:0 P:2 Credits:4

**Course Outcomes:** Through this course students should be able to

CO1 :: understand the time and space complexity of programs and data-structures.

CO2 :: illustrate the importance of Linked List in context of real world problems

CO3 :: differentiate the Stack and Queue data structures for problem solving

CO4 :: use of recursion in iteration process and tree data structure

CO5 :: analyze the effectiveness of AVL Tree and Heap Data Structures

CO6 :: use of Graph and Hashing techniques in problem solving

## Unit I

**Introduction** : Basic Concepts and Notations, Complexity analysis: time space and trade off, Omega Notation, Theta Notation, Big O notation, Basic Data Structures.

**Arrays** : Linear arrays: memory representation, Array operations: traversal, insertion, deletion, sorting, searching and merging and their complexity analysis.

**Sorting and Searching** : Bubble sort, Insertion sort, Selection sort

## Unit II

**Linked Lists** : Introduction, Memory representation, Allocation, Traversal, Insertion, Deletion, Header linked lists: Grounded and Circular, Two-way lists: operations on two way linked lists

## Unit III

**Stacks** : Introduction: List and Array representations, Operations on stack (traversal, push and pop), Arithmetic expressions: polish notation, evaluation and transformation of expressions.

**Queue** : Array and list representation, operations (traversal, insertion and deletion), Priority Queues, Deques

## Unit IV

**Trees** : Binary trees: introduction (complete and extended binary trees), memory representation (linked, sequential), Binary Search Tree: introduction, searching, insertion and deletion, In-order traversal, Pre-order traversal, Post-order traversal using recursion

**Recursion** : Introduction, Recursive implementation of Towers of Hanoi, Merge sort, Quick sort

## Unit V

**AVL trees and Heaps** : AVL trees Introduction, AVL trees Insertion, AVL trees Deletion, Heaps: Insertion, Heaps: Deletion, HeapSort, Huffman algorithm

## Unit VI

**Graphs** : Warshall's algorithm, Graph Traversal: BFS, DFS, Shortest path algorithm Floyd Warshall Algorithm(modified warshall algorithm)

**Hashing** : Hashing introduction: hash functions, hash table, Open hashing (separate chaining), Closed hashing (open addressing): linear probing, quadratic probing and double hashing.

## List of Practicals / Experiments:

### Array

- Program to implement insertion and deletion operations in arrays

### Searching

- Program to implement different searching techniques - linear and binary search

### Sorting

- Program to implement different sorting techniques – bubble, selection and insertion sort

### Linked List

- Program to implement searching, insertion and deletion operations in linked list

**Doubly Linked List**

- Program to implement searching, insertion and deletion operations in doubly linked list

**Stack**

- Program to implement push and pop operations in stacks using both arrays and linked list

**Queues**

- Program to implement enqueue and dequeue operations in queues using both arrays and linked list

**Recursions**

- Program to demonstrate concept of recursions with problem of tower of Hanoi

**Recursive Sorting**

- Program to implement recursive sorting techniques - merge sort, quick sort

**Tree**

- Program to create and traverse a binary tree recursively

**Binary Search Tree**

- Program to implement insertion and deletion operations in BST

**Heaps**

- Program to implement insertion and deletion operations in Heaps and Heap Sort

**Text Books:**

1. DATA STRUCTURES by SEYMOUR LIPSCHUTZ, MCGRAW HILL EDUCATION
